Problem

When it comes to identifying a quality restroom it can be difficult to get real-time data based upon feedback about the safety, cleanliness, and wait-time.

Problem Statistics

- ▶ 63% of Americans had unpleasant experience with public restrooms [1]
- ► Almost three-fourths of people surveyed said an unclean bathroom suggest poor management [1]
- ► 500,000 Bacteria found per sq. in [2]
- ▶ 60% of people delay defecation in public restroom [3]

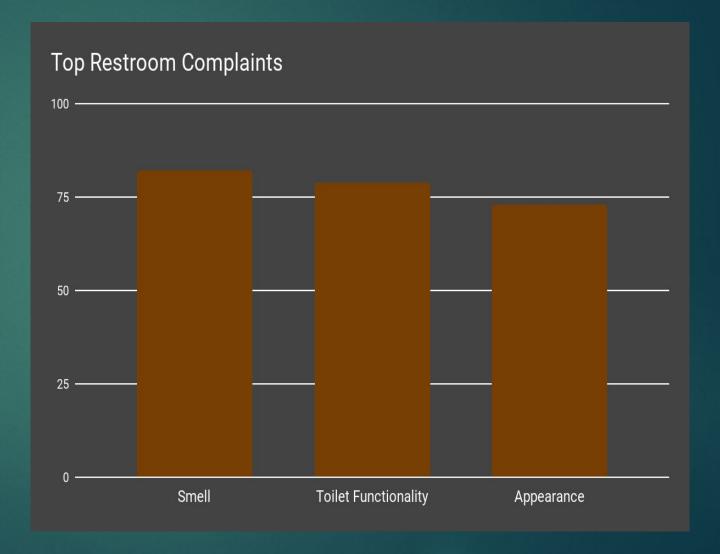

[1] PR-Newswirem

[2] Enviro-Master

[3] Theconversation

Problem Statistics

 In a survey of men and women aged 18-65 done by The Bradley Corporation [1]

[1] PR-Newswirem

Problem Statistics

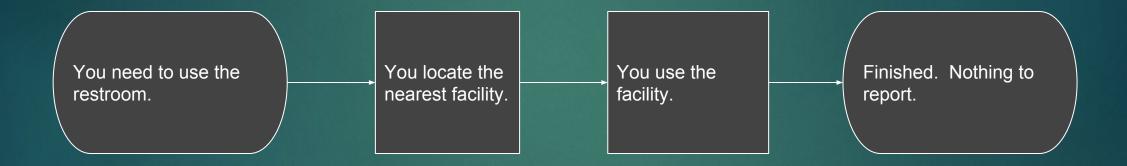

- Bathroom cleanliness also affects sales [1]
- 64% of people surveyed said they would think twice or not frequent a business if its restrooms are unclean [1]

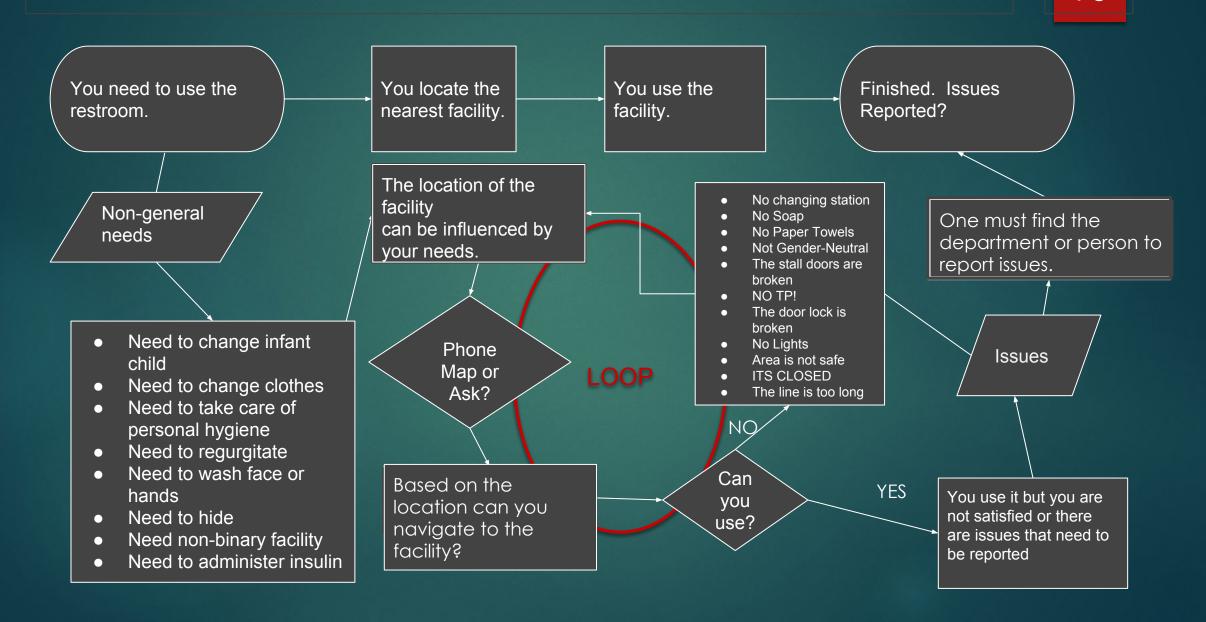

Problem Characteristics

- No real-time data concerning restroom
 - Cleanliness
 - Safety
- Lack of amenities such as:
 - No soap
 - Hand Dryers not working
 - No hand towels
- Gender neutral restrooms are uncommon
- Quality of amenities
- Long lines

Ideal World

Solution Statement

Skadoosh will allow users the ability to locate, provide feedback, and to safely use public restrooms within your surrounding area.

Solution Characteristics

User Profiles

- Stores needs into a user profile shared with the application
- Users can have multiple profiles

Location Profiles

- ▶ Locations have attributes that can be matched against user needs
- Locations can be connected by special Owner Profiles

Owner Profiles

Able to receive analytics and feedback about the facility

GPS and facility matching

- Locations can be located in maps and users can be guided to facilities
- Users can create restroom location on their personal map and with verification from other users it can be added to the official map

Feedback

Users can provide real-time feedback about facilities making complaints or suggestions

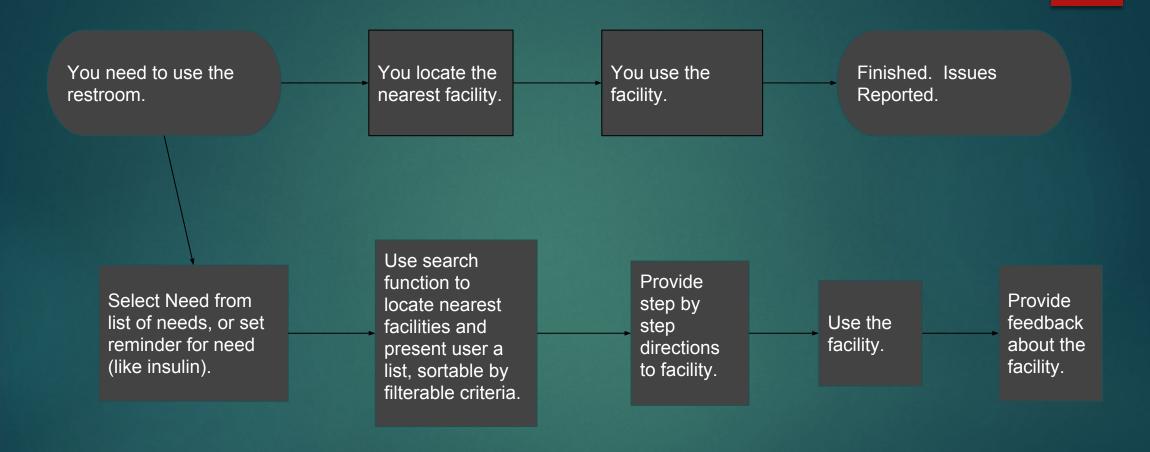

Our Duties... Doodies

- 1. Provide users with the best possible restroom
- 2. Help users avoid a long wait time
- 3. Provide owners with real time constructive feedback
- 4. It's not our job to offer clean restrooms... it's our doody

Issues we can't unclog

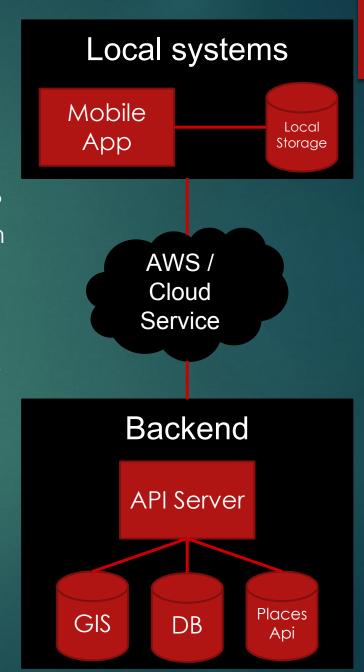

1. Actual maintenance of restrooms

Can we improve the flow for users?

MFCD

- The iOS/Android app will talk with the local storage saving various personal information to run the app that doesn't need to be stored on the DB
- The iOS/Android app will also get information from the API server
- The API server will communicate with the GIS, DB, and Places API
- GIS and the places API will be served by Google's API's
- The DB will be a Postgres DB storing user information, restroom information, reviews, and location information to be provided through the API server.
